MODULE 0

The PRNTR Mindset

Most people trade like they are playing a slot machine. PRNTR traders trade like a doctor follows a checklist. We wait for one very specific picture on the chart, we decide how much we can lose before we start, and we skip everything else. Skipping is the skill.

MODULE 0

Trading is a business with rules

A doctor checks the same things, in the same order, every time.

- PRNTR is a checklist for the chart.
- If a trade isn't on the checklist, it doesn't exist.

MODULE 0

Most setups get skipped

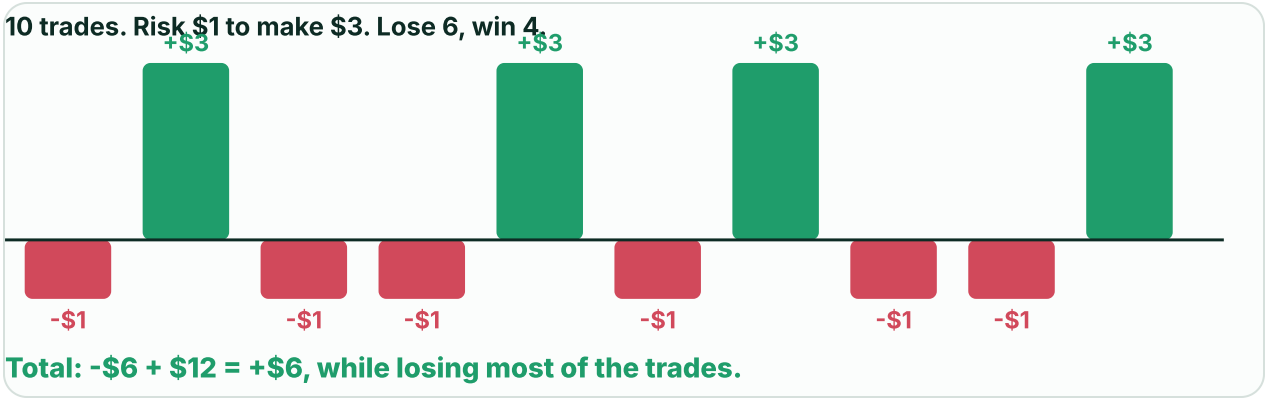

- Hundreds of charts a day.
- Almost all fail a check.
- Skipping is the skill.

MODULE 0

Risk first, profit second

- Decide the loss in dollars before you click.
- Only take trades that pay a few times the risk.

MODULE 0

The three PRNTR promises

- **I wait.** No setup, no trade.
- **I decide my loss first.**
- **I never move my stop further away.**

MODULE 1

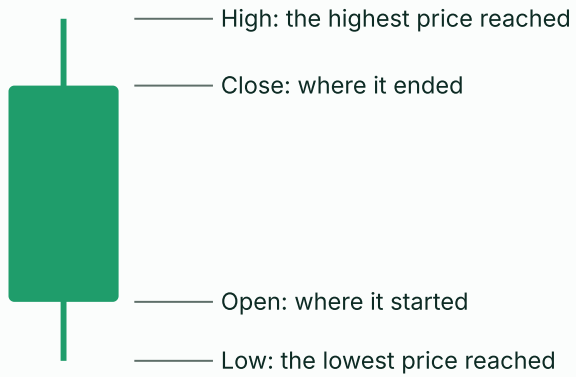

Reading the Chart Like a Story

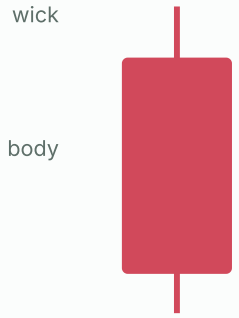

A chart is just a story of what price did. Each candle is one chapter: where price started, how high it went, how low it went and where it ended. Put the chapters together and you see whether the story is going up, going down or going sideways.

MODULE 1

One candle, four numbers

Green = price went UP

Red = price went DOWN

- Open, high, low, close.
- Body = the thick part.
- Wick = where price got pushed back.

MODULE 1

Up, down or sideways

Uptrend

Higher highs, higher lows

Downtrend

Lower lows, lower highs

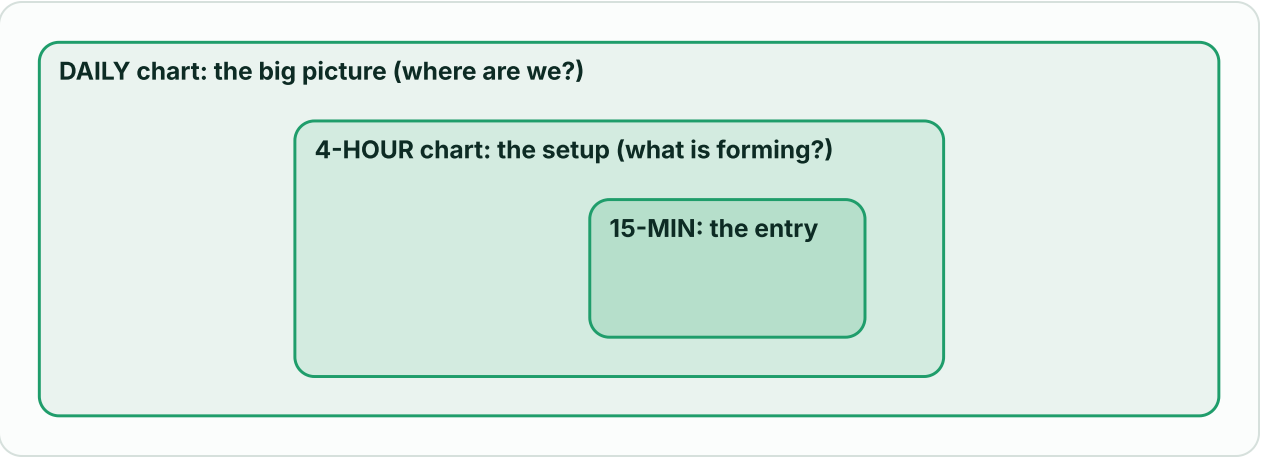

Sideways

Ceiling and floor. PRNTR hunts here.

MODULE 1

Timeframes are Russian dolls

- Big chart: where are we?
- Middle chart: is a setup forming?
- Small chart: where do I get in?

MODULE 2

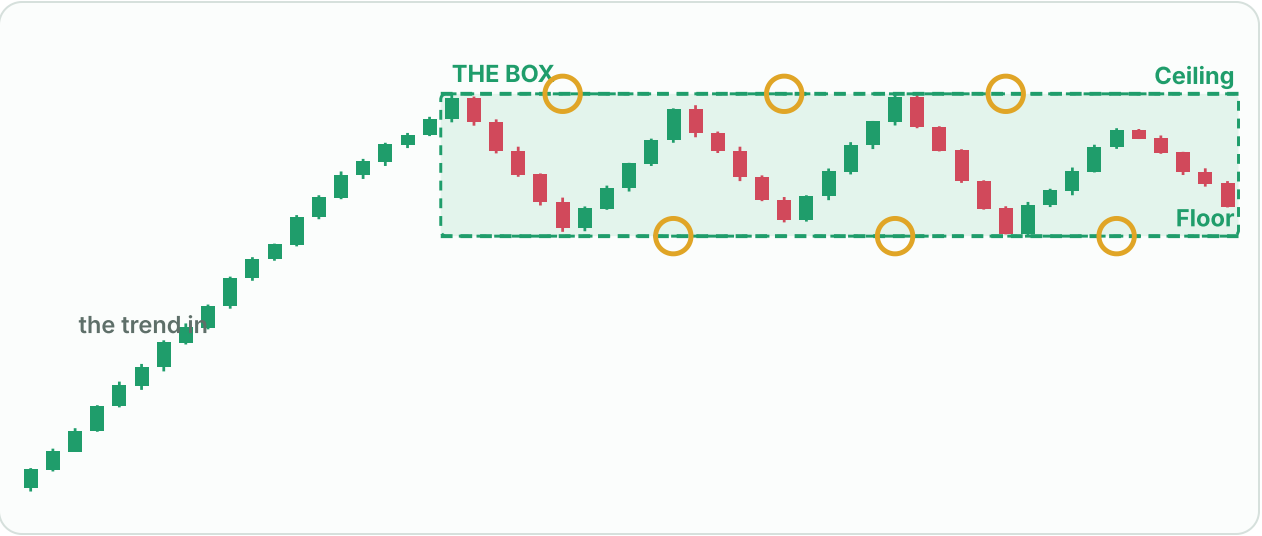

The Box

After price runs up or down for a while, it gets tired and rests. While it rests, it bounces between a ceiling and a floor. We draw a box around that. The box is where everybody puts their stop-losses, and that is exactly what makes it useful.

PRNTR · Licensed to STUDENT NAME · do not share

MODULE 2

Drawing the box

- Ceiling on top, floor below.
- Circles = touches.
- More touches = stronger box.

PRNTR · Licensed to STUDENT NAME · do not share

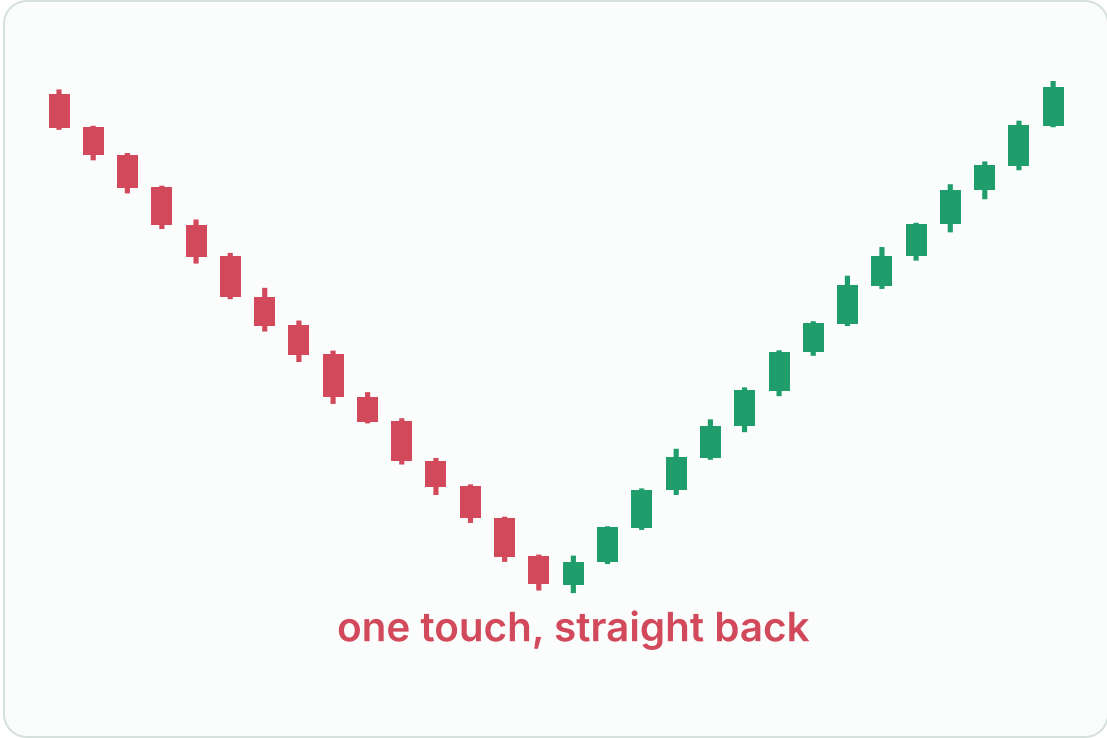

MODULE 2

A real box versus a V

✓ Real box

Flat, touches on both sides, takes time.

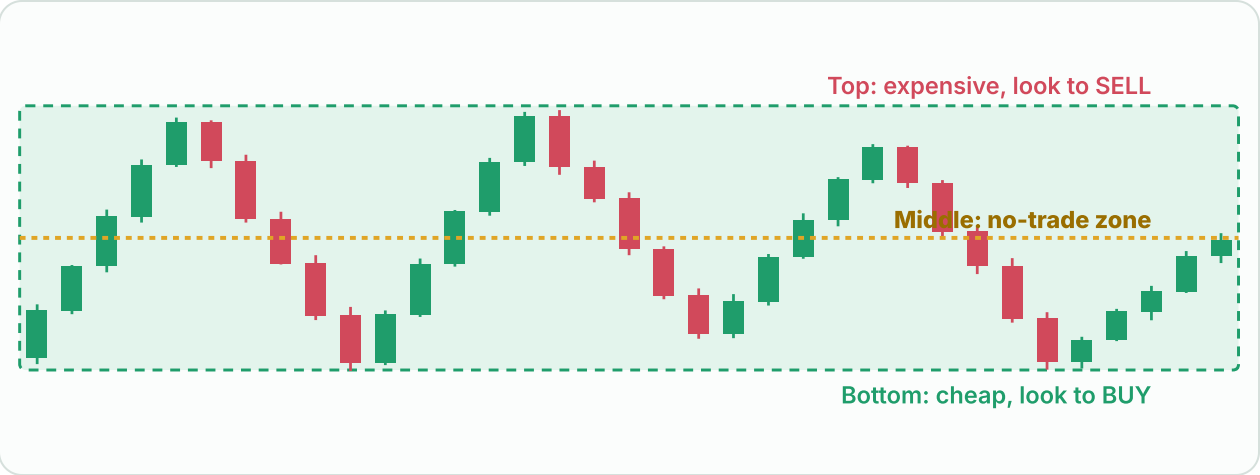

✗ Not a box

A V-shape. Straight down, straight back.

MODULE 2

The three zones

- Bottom half: look to buy.
- Top half: look to sell.
- Middle: don't trade.

MODULE 2

Why the box matters

Every box has two piles of stop-losses sitting just outside it.

- Buyers' stops: just below the floor.
- Sellers' stops: just above the ceiling.
- Big players know exactly where they are.

MODULE 3

The Fake-Out and the Return

Big players need lots of orders to fill their big trades. The biggest piles of orders sit just outside the box. So price pokes outside the box, grabs those orders, and comes straight back in. That poke is the fake-out. When price comes back inside, it often runs all the way to the other side of the box.

PRNTR · Licensed to STUDENT NAME · do not share

MODULE 3

What a fake-out looks like

- Price pokes past the ceiling.
- Stop-losses get triggered.
- It closes back inside. Breakout buyers are trapped.

PRNTR · Licensed to STUDENT NAME · do not share

MODULE 3

Fake-out or real breakout?

✓ Fake-out
Wick out, close back inside.

✗ Real breakout
Closes outside and keeps going.

PRNTR · Licensed to STUDENT NAME · do not share

MODULE 3

The Return and the trip across

- 1. Fake-out grabs the stops.
- 2. The Return: back inside.
- 3. The trip across to the other side.

MODULE 3

When it fails

- No Return, no trade.
- We wait for the Return, then the Turn (Module 4).

CHECK YOURSELF

Can you answer these?

1. Price drops fast and shoots straight back up in a few candles. Is that a box?
2. Where in the box do PRNTR traders look to buy?
3. Where do traders who bought near the floor put their stop-losses?
4. A wick pokes above the ceiling but the candle closes back inside. What is it?
5. After a fake-out below the floor and a return inside, where is the target?
6. Price pokes below the floor and keeps falling. Do you buy?
