Education only, not financial advice. Trading with leverage carries a high risk of loss. Charts are illustrations unless marked otherwise.

YOUR COURSE

The PRNTR Method

15 modules, from first candle to a full trading plan. This workbook is Part 1.

Module 0 The PRNTR Mindset ✔ **in this workbook**

Module 1 Reading the Chart Like a Story ✔ **in this workbook**

Module 2 The Box ✔ **in this workbook**

Module 3 The Fake-Out and the Return ✔ **in this workbook**

Module 4 The Turn

Module 5 The Launch Pad

Module 6 The PRNTR Setups

Module 7 Zooming In for the Entry

Module 8 Confirmation and the Scorecard

Module 9 Confluence

Module 10 Risk and Sizing

Module 11 Managing the Trade

Module 12 Using PRNTR Signals

Module 13 The Journal and Review

Module 14 Your Trading Plan

How each module works

Part	What it is
Explain it like I'm 10	The whole idea in one paragraph. If you can say this out loud, you understand the module.
Lessons	Short pages with a picture for every idea.
PRNTR rules	The yellow boxes. These are the rules you follow without exception.
Check yourself	3 questions. Answers are at the back. Don't move on until you get all three.

MODULE 0

The PRNTR Mindset

Think like a doctor, not a gambler

EXPLAIN IT LIKE I'M 10

Most people trade like they are playing a slot machine. PRNTR traders trade like a doctor follows a checklist. We wait for one very specific picture on the chart, we decide how much we can lose before we start, and we skip everything else. Skipping is the skill.

0.1 Trading is a business with rules

A doctor doesn't guess. They check the same things, in the same order, every time, because even smart people make mistakes when they are tired or emotional. Trading is the same. PRNTR is a checklist for the chart.

> **PRNTR rule:** if a trade is not on the checklist, it does not exist.

0.2 Most setups get skipped

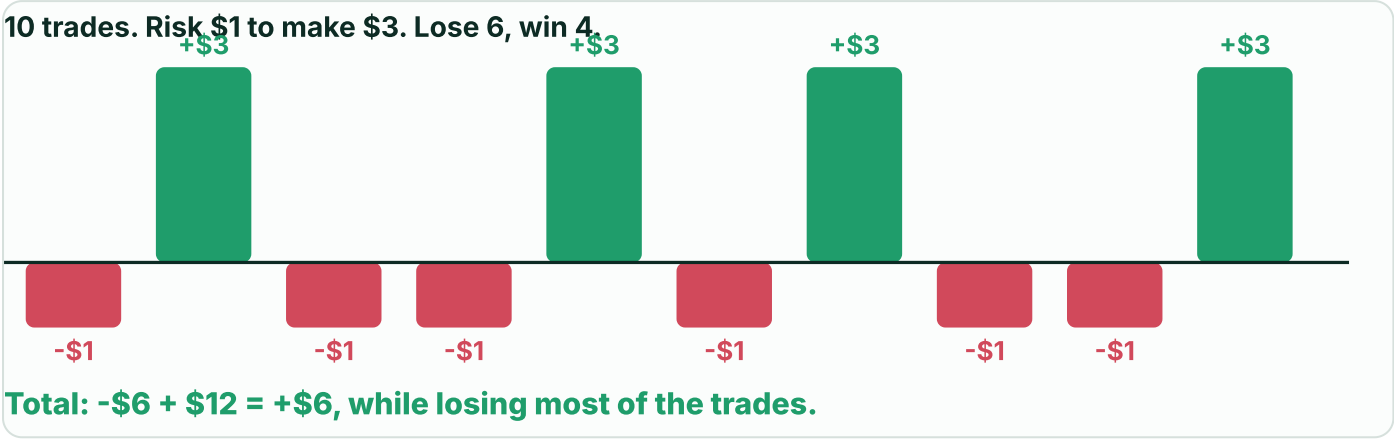

The PRNTR bot looks at hundreds of charts every day. Almost all of them fail at least one check. That's normal and good. A trader who takes every setup is like a doctor who prescribes medicine to everyone in the waiting room.

Illustration: out of every 100 charts, very few become a trade.

0.3 Risk first, profit second

Before every trade we answer one question: **how much do I lose if I'm wrong?** Only then do we look at how much we could make. A trade must pay at least a few times what it risks.

Why this works: you can be wrong more often than you're right and still grow the account.

0.4 The three PRNTR promises

1. **I wait.** No setup, no trade, no matter how bored I am.
2. **I decide my loss first.** In dollars, before I click.
3. **I never move my stop further away.** If I'm wrong, I'm wrong, and that's fine.

Check yourself

1. The bot skips most charts. Is that a problem?
2. What question do you answer before every trade?
3. You risk $1 to make $3. You win 4 trades and lose 6. Are you up or down?

MODULE 1

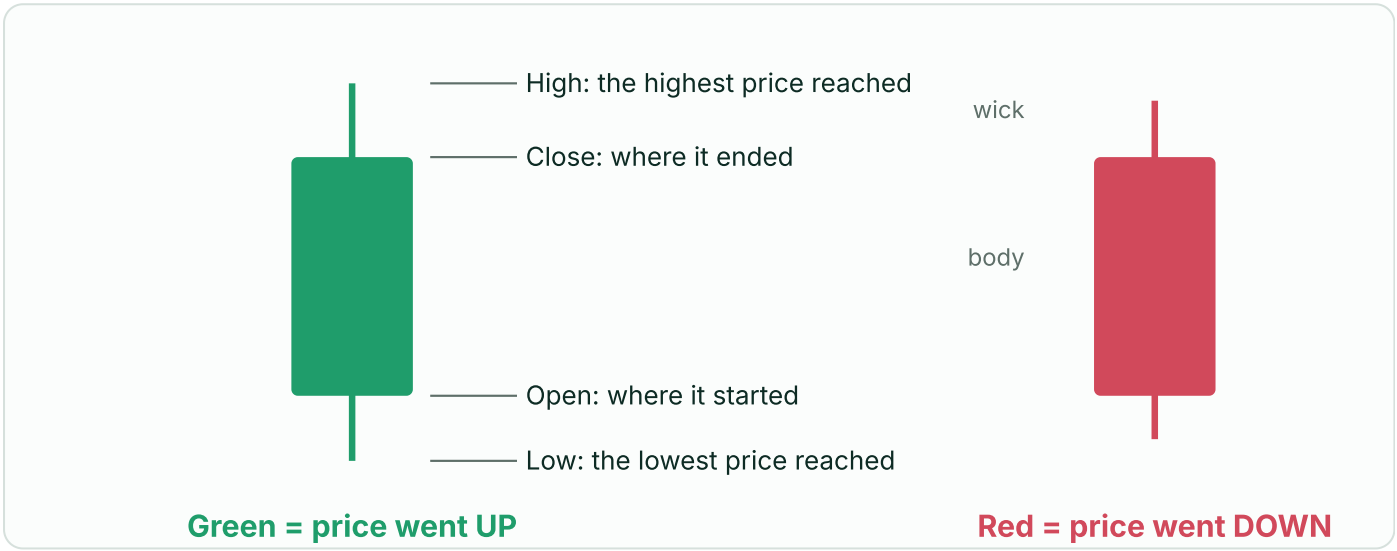

Reading the Chart Like a Story

Candles, trends and the Russian dolls

EXPLAIN IT LIKE I'M 10

A chart is just a story of what price did. Each candle is one chapter: where price started, how high it went, how low it went and where it ended. Put the chapters together and you see whether the story is going up, going down or going sideways.

1.1 One candle, four numbers

Every candle shows four prices for one period of time: open, high, low and close. The thick part is the **body**. The thin lines are the **wicks**. A long wick means price went there and got pushed back.

PRNTR rule: wicks show where price was rejected. Remember this, it matters in Module 3.

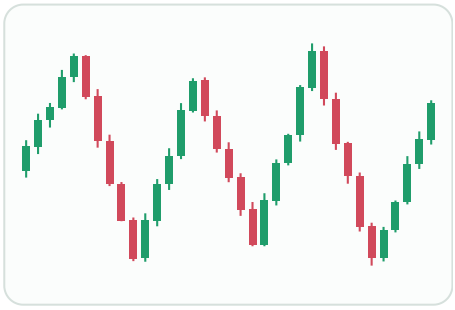

1.2 Up, down or sideways

Uptrend
Each high is higher, each low is higher. Like climbing stairs.

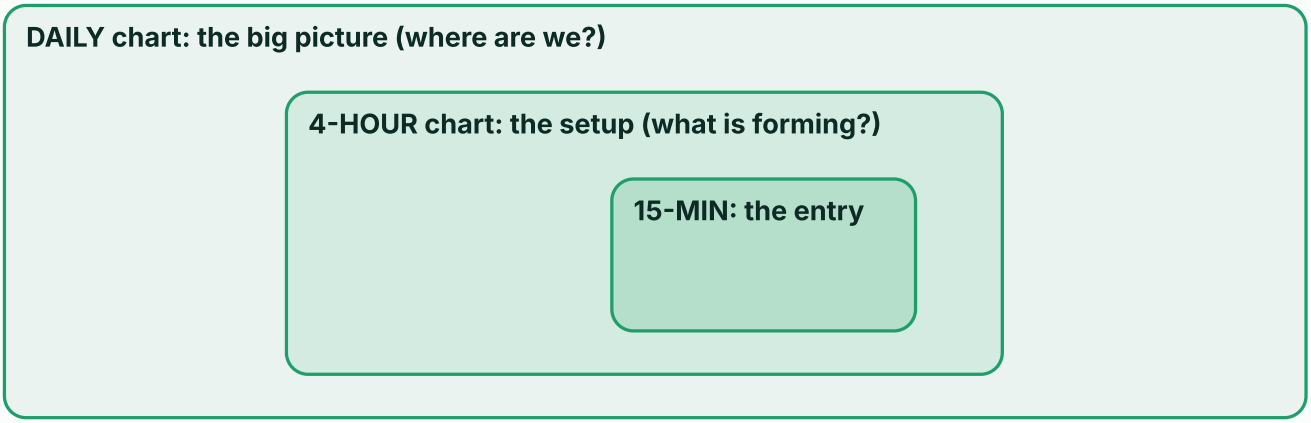

Downtrend
Each low is lower, each high is lower. Like walking down stairs.

Sideways
Bouncing between a ceiling and a floor. This is where PRNTR hunts.

1.3 Timeframes are Russian dolls

The same coin can be shown with one candle per day, per 4 hours or per 15 minutes. The bigger chart holds the smaller one, like Russian dolls. PRNTR always reads from big to small:

1. **Big chart:** where are we in the bigger story?
2. **Middle chart:** is a setup forming?
3. **Small chart:** where exactly do I get in?

> **PRNTR rule:** a setup on a small chart never beats what the big chart is saying.

Check yourself

1. What does a long wick at the top of a candle tell you?
2. Higher highs and higher lows means what?
3. Which chart do you read first: 15-minute or daily?

MODULE 2

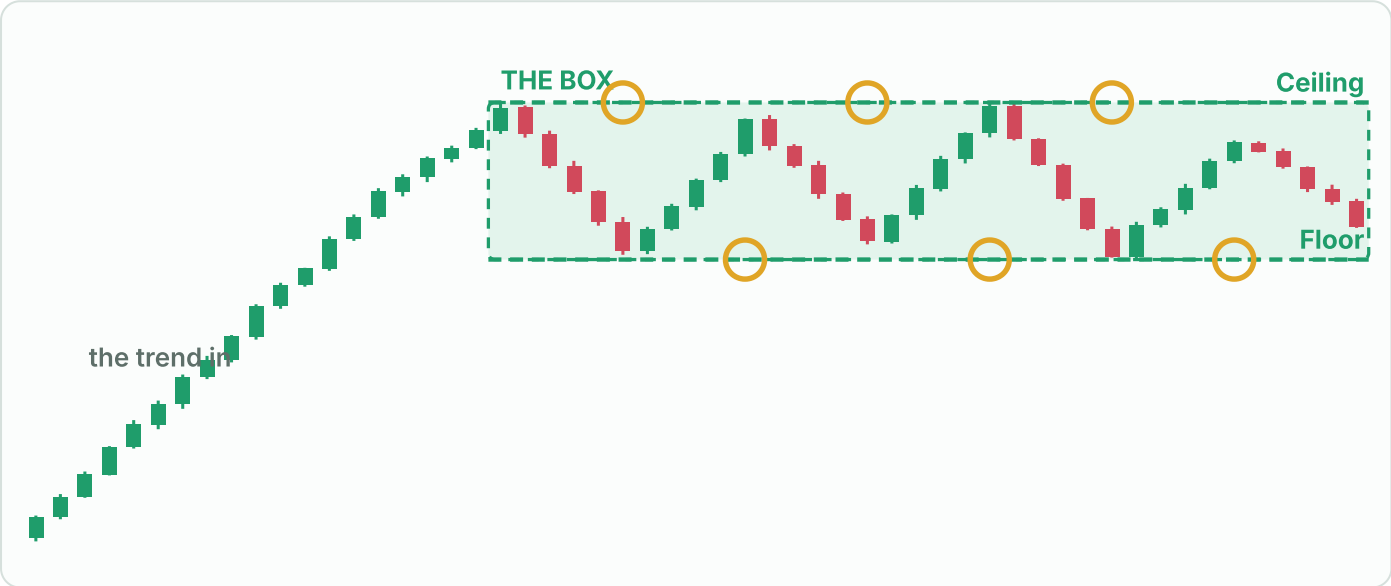

The Box

Where price rests, and where the setup is born

EXPLAIN IT LIKE I'M 10

After price runs up or down for a while, it gets tired and rests. While it rests, it bounces between a ceiling and a floor. We draw a box around that. The box is where everybody puts their stop-losses, and that is exactly what makes it useful.

2.1 Drawing the box

Find where price stopped trending and started bouncing. Draw the **ceiling** at the top of the bounces and the **floor** at the bottom. Use the bodies and the main highs and lows, not one odd spike.

- The circles are **touches**: each time price reaches the ceiling or floor and turns back.
- More touches = a stronger box. Everybody can see it.

2.2 A real box versus a V

✔ Real box

Several touches on both sides, flat, and it takes time to form.

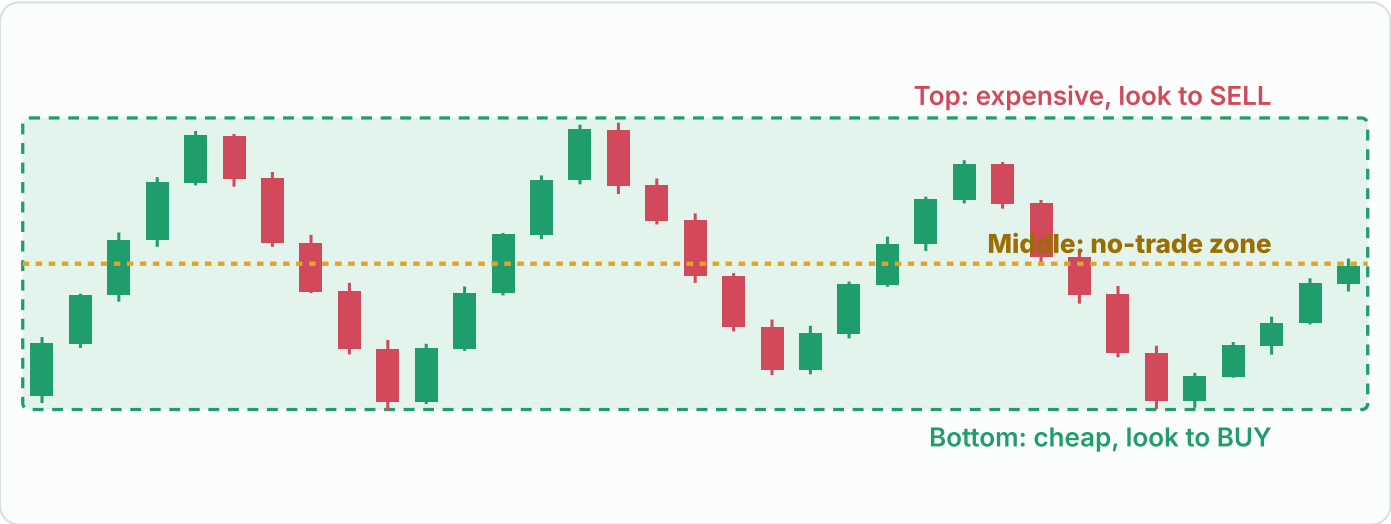

✘ Not a box

A V-shape: price drops and shoots straight back. No resting, no box.

PRNTR rule: a box needs time. If it formed in a few candles, it isn't a box yet. Flat, not tilted. Touches on both sides.

2.3 The three zones of the box

Split the box in half. The **bottom half** is cheap: that's where we want to buy. The **top half** is expensive: that's where we want to sell. The **middle** is a coin flip, so we don't trade there.

PRNTR rule: never buy in the top half, never sell in the bottom half, never trade the middle.

2.4 Why the box matters

Traders who bought near the floor put their stop-losses just **below** it. Traders who sold near the ceiling put theirs just **above** it. So every box has two piles of orders sitting right outside it. Big players know this. Module 3 is what they do with it.

PRNTR · Licensed to STUDENT NAME (student@email.com) · Personal use only, do not share

Check yourself

1. Price drops fast and shoots straight back up in a few candles. Is that a box?
2. Where in the box do PRNTR traders look to buy?
3. Where do traders who bought near the floor put their stop-losses?

MODULE 3

The Fake-Out and the Return

The trap that starts every PRNTR trade

EXPLAIN IT LIKE I'M 10

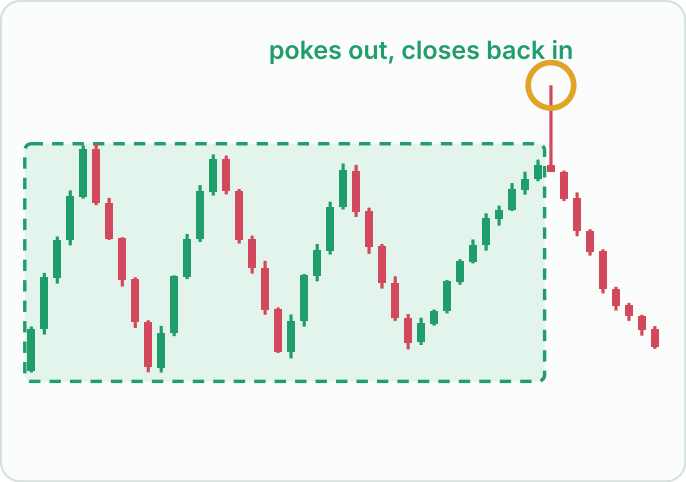

Big players need lots of orders to fill their big trades. The biggest piles of orders sit just outside the box. So price pokes outside the box, grabs those orders, and comes straight back in. That poke is the fake-out. When price comes back inside, it often runs all the way to the other side of the box.

3.1 What a fake-out looks like

Price pushes just past the ceiling. Everyone who sold near the ceiling gets stopped out, and breakout buyers jump in. Then price closes **back inside** the box. The people who bought the breakout are now trapped.

3.2 Fake-out or real breakout?

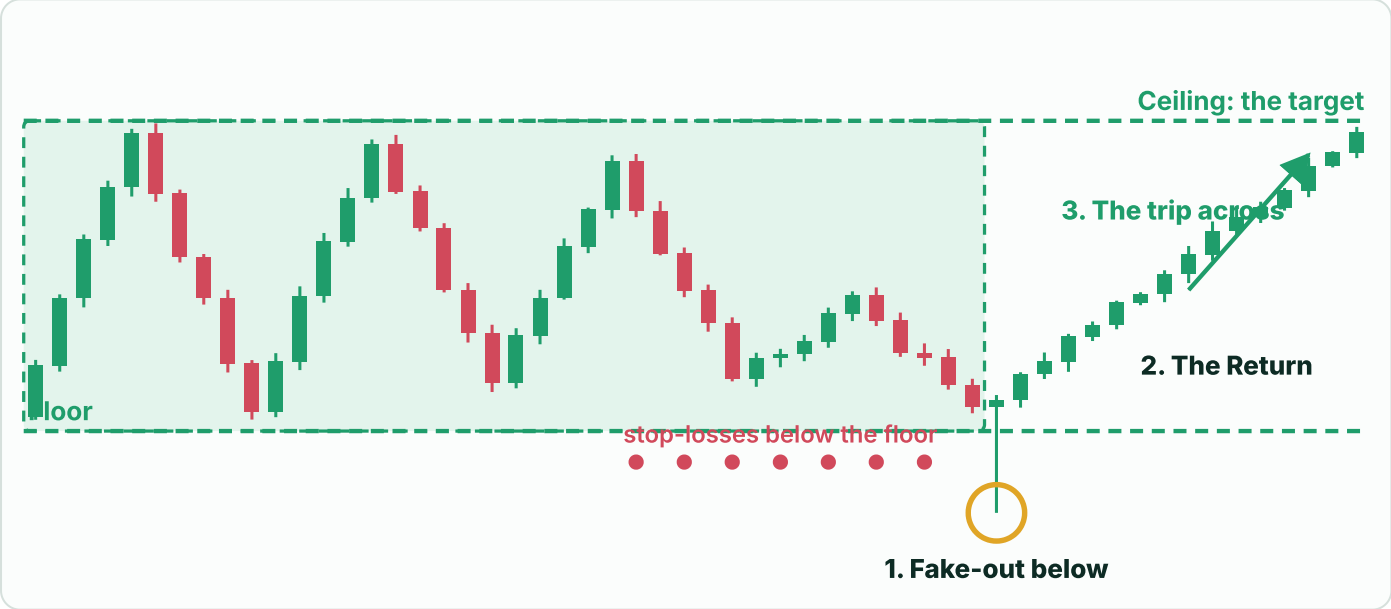

✔ **Fake-out**
A wick pokes out, but the candle closes back inside the box.

✘ **Real breakout**
Candles close outside and keep going. The box is broken. No trade.

> **PRNTR rule:** a fake-out is a small poke, not a journey. If price closes far outside and keeps going, the idea is dead.

3.3 The Return, and the trip across

This is the heart of PRNTR, shown here at the floor:

1. **Fake-out:** price pokes below the floor and grabs the stop-losses.
2. **The Return:** price closes back inside the box.
3. **The trip across:** price often travels to the other side of the box. The ceiling becomes the target.

At the ceiling it's the same picture upside down: fake-out above, return inside, trip down to the floor.

PRNTR · Licensed to STUDENT NAME (student@email.com) · Personal use only, do not share

3.4 When it fails

Sometimes price pokes out and **never comes back**. That isn't a fake-out, it's a real move. This is why we never enter just because price poked out. We wait for the Return, and then for the Turn (Module 4).

> **PRNTR rule:** no Return, no trade.

Check yourself

1. A wick pokes above the ceiling but the candle closes back inside. What is it?
2. After a fake-out below the floor and a return inside, where is the target?
3. Price pokes below the floor and keeps falling. Do you buy?

ANSWERS

Check yourself: answers

Module 0 · The PRNTR Mindset

1. **The bot skips most charts. Is that a problem?**
   No. Skipping bad setups is the whole skill.
2. **What question do you answer before every trade?**
   How much do I lose if I'm wrong?
3. **You risk $1 to make $3. You win 4 trades and lose 6. Are you up or down?**
   Up $6: you lose $6 and win $12.

Module 1 · Reading the Chart Like a Story

1. **What does a long wick at the top of a candle tell you?**
   Price went up there and got pushed back down.
2. **Higher highs and higher lows means what?**
   An uptrend.
3. **Which chart do you read first: 15-minute or daily?**
   Daily. Always big to small.

Module 2 · The Box

1. **Price drops fast and shoots straight back up in a few candles. Is that a box?**
   No. That's a V-shape. A box needs time and touches on both sides.
2. **Where in the box do PRNTR traders look to buy?**
   The bottom half (cheap). Never the middle.
3. **Where do traders who bought near the floor put their stop-losses?**
   Just below the floor.

Module 3 · The Fake-Out and the Return

1. **A wick pokes above the ceiling but the candle closes back inside. What is it?**
   A fake-out.
2. **After a fake-out below the floor and a return inside, where is the target?**
   The ceiling: the other side of the box.
3. **Price pokes below the floor and keeps falling. Do you buy?**
   No. No Return, no trade.

Next: Part 2

Module 4 onward: the Turn, the Launch Pad and the PRNTR setups, where the Box and the Fake-Out become an actual entry.
